

How to Mod SDSG

You need vscode or visual studio (or if your using school computer vscode.dev)

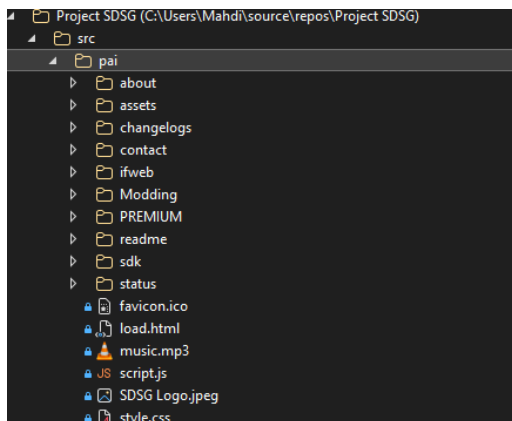

Then you open up your SDSG install

This is what it should look like (Visual Studio) this is the official Mahdiisdumb dev version that's why files exist while yours don't

Open Up src/ and that's where we start

Open up pai/ and you'll see a network of folders

These are the folders you access on the main page

All you need to know is that
assets=Basic Games Selector

DO NOT MESS
WITH
PREMIUM OR
MAHDI
STUDIOS
WILL MAKE IT
FREE AND
RUIN IT FOR
EVERYONE
WHO PAID

To add your unverified games, open up
asset/ you'll find tons of
games but all you need to do is find games.js
you should see const games = and a whole list
of games add the directory name of your game
in there and put it in assets/ but make sure your
directory has a run.html any other name wont
work

REMEMBER SDSG IS OPEN SOURCE SO I DONT
REALLY GIVE A FUCK WHAT YOU DO WITH IT
ASLONG AS YOU KEEP UPDATING IT AND DONT
SHARE THE PREMIUM CODE YOU SHOULD BE
FINE
